11th Annual **INTERPA** Conference

12-14 September 2022

DIGITALIZATION OF POLICING

Organized by
INTERPA and Police Staff College Bangladesh

Digitalization of policing covers efforts to enable police forces to safeguard citizens by preventing and identifying crime in a society that is rapidly going digital.

Digitalization of Policing: The Case of Türkiye

Asst. Prof. Dr. Oğuzhan Yanarışık

Turkish National Police Academy, Türkiye

Our world has gone digital, from internet browsing to social media access, online banking, and shopping. The public's expectations for their interactions with law enforcement are evolving. The general public now anticipates police forces to have a sizable online presence, with a degree of functionality and usability comparable to other services they use on a regular basis. While numerous technological advancements have greatly improved how people communicate and conduct business; digital or cybercrimes have also grown dramatically in recent years. Additionally, there will be more and more digital evidence available. To be able to tenaciously pursue criminals, protect the weak, and lessen crime wherever it occurs, policing must adjust to and respond to the digital environment.

Digitalization of policing covers efforts to enable police forces to safeguard citizens by preventing and identifying crime in a society that is rapidly going digital. Enhancing frontline staff and officer knowledge and skills to combat digital crime, ensuring their capacity to respond to cybercrime with competence, and enhancing and preserving their capabilities in the dynamic digital world are all critical in this new context. It is also necessary to supply a basic, well-known, and trustworthy digital communication service between the public and the police to guarantee that the public is informed and equipped with digital tools. In addition, it is required to provide the finest level of service to the public by using digital policing into the newly-reformed criminal justice system by delivering all essential case file data and evidence, including multimedia, once digitally captured, saved, and protected in a chain of evidential integrity.

In this presentation, examples from pertinent institutions are used to analyze the digitalization of policing within the context of the Turkish experience. Turkish Ministry of Interior, Turkish General Directorate of Security and Turkish National Police Academy have been consistently working on following the latest global developments and trends in digitalization of policing. Relevant institutions have been actively utilizing digital tools to combat crime, improve their use of digital intelligence and evidence, make it simpler and more consistent for the public to make digital contact, and ensure they can transfer all information in a digital format to the criminal justice system.

Turkish National Police Academy is one of the leading higher education institutions in Türkiye in efficiently using digital tools in its educational and operational activities. It plans and organizes comprehensive online training programs according to the needs of the law enforcement personnel as well as

the Police Organization itself. It maintains a robust digital infrastructure to carry out its educational activities, even in the face of extreme conditions like the restrictions imposed by the Covid-19 pandemic. It actively uses its widely followed social media accounts to foster a healthy and sustainable dialogue with the public.
